Delegation of Authority – T4 and T5 Incident Commander

We hereby delegate you authority for management activities on Federal and State Lands within the Uintah Basin Fire Management Unit for Type 4 and Type 5 fires. The organization will be commensurate with complexity.

This delegation carries with it full responsibility for management of Type 4 and 5 fires. All management actions will be conducted in accordance with the following:

- First and foremost, MANAGE ALL WILDLAND FIRES SAFELY. Priority one is for FIREFIGHTER
 and PUBLIC SAFETY. You are directed to manage risk exposure, constantly identify and
 abate hazards, refuse to accept unnecessary risk, and make risk-related decisions at the
 appropriate level.
- 2. Initially conduct a thorough assessment of the fire situation using the Green-Operational Engagement section located in the Incident Response Pocket guide (IRPG) Green pages 1-14). Perform an Incident Complexity Analysis for your incident with every initial size-up (IRPG page If you have checked "Yes" on 3 or more of the analysis boxes, consider requesting the next level of incident management support. Review the Incident Complexity Analysis periodically to maintain situational awareness.
- Before engaging in any fire management assignment, establish Lookouts, Communications, Escape Routes, and Safety Zones (LCES).
- 4. Constantly monitor the effectiveness of the planned strategy and tactics. Immediately delay, modify, or abandon firefighting action on any part of a wildland fire where strategies and tactics cannot be safely implemented and only execute suppression actions when and where they are safe and effective.
- 5. Ensure that all firefighting actions are in full compliance with the Ten Standard Fire Orders and the mitigation of the applicable Watch Out Situations has been accomplished. Maintain command and control of all fireline resources. Personally conduct inspections for safety and health hazards pertinent to the above Orders and Situations.
- 6. Prior to taking management action on any fire, become familiar with the most current fire weather forecast for that day. If the weather you are experiencing on a fire is significantly different from the current fire weather forecast for the day, take on site weather observations and request a **spot weather forecast** from Uintah Basin Interagency Fire Center (UBIFC). At a minimum, take weather observations every hour.
- Ensure that UBIFC and all resources on your wildland fire incident are informed of your name as the assigned Incident Commander and keep all personnel informed of any changes in incident command leadership.
- 8. Ensure that all fireline personnel on your incident are **fully qualified**, as certified by their employing agency, which is documented on their current Incident Qualifications Card.
- 9. Provide and document a briefing (Uintah Basin Interagency Incident Organizer) to all firefighters at the beginning of every operational period an After Action Review (AAR) at the end of every operational period. Brief all new firefighters of the fire situation and Incident Action Plan that arrive on your fire.
- 10. **Brief** UBIFC of the incident situation, and convey updates of the fire situation every 2-3 hours or if the situation changes significantly at any time.
- 11. Document action to manage fatigue for all fires that exceed one operational period, actions taken to ensure compliance with guidelines for work, rest, and length of commitment, and pre-approvals and justifications for excessively long work shifts.
- 12. You have authority to supersede natural and cultural resource considerations and constraints to provide for the safety of firefighters, other personnel, and the public.
- Manage incident costs consistent with values at risk. Fire on State and private lands have special cost constraints. Contact UBIFC for further details (aerial resources).

ICS 214 (5)

TYPE 1 INCIDENT COMPLEXITY INDICATORS

General Indicators

- Incident displays high resistance to stabilization or mitigation and will extend into numerous operational periods covering several days to several weeks
- Incident objectives usually not met within the first several Operational Periods
- Resources may need to remain at scene for up to 14 days, require complete logistical support, and several possible personnel replacements
- Numerous kinds and types of resources may be required, including many that will trigger a formal demobilization process
- DOD assets, or other nontraditional agencies, may be involved in the response, requiring close coordination and support
- Complex aviation operations involving multiple aircraft may be involved
- Formal Incident Planning Process is initiated and followed.
- Written Incident Action Plan (IAP) needed for each Operational Period
- Responders may range from 500 to several thousand total
- Incident requires an Incident Base and numerous other ICS facilities to provide support
- Population surrounding the region or state where the incident occurred is affected
- Numerous Critical Infrastructure or Key Resources adversely affected or destroyed. Actions to mitigate effects will extend into multiple Operational Periods spanning days or weeks and require longterm planning and considerable coordination
- Elected and appointed governing officials, stakeholder groups, and political organizations require a high level of interaction

Span of Control Indicators

- IC role filled
- Large numbers of resources supervised indirectly through the expansion of the Operations Section and its subordinate positions
- Branch Director Position(s) may be filled for organizational or span of control purposes
- Division Supervisors, Group Supervisors, Task Forces, and Strike Teams used to reduce span of control
- All Command Staff positions filled and many include assistants
- All General Staff positions filled and many include deputy positions
- Most or all ICS functional units filled to reduce workload

Type 2 Incident Complexity Indicators

General Indicators

- Incident displays moderate resistance to stabilization or mitigation and will extend into multiple operational periods covering several days
- Incident objectives usually not met within the first several Operational Periods
- Resources may need to remain at scene for up to 7 days and require complete logistical support
- Numerous kinds and types of resources may be required including many that will trigger a formal demobilization process
- Formal Incident Planning Process is initiated and followed
- Written Incident Action Plan (IAP) needed for each Operational Period
- Responders may range from 200 to 500 total
- Incident requires an Incident Base and several other ICS facilities to provide support
- Population surrounding general incident area affected
- Critical Infrastructure or Key Resources may be adversely affected, or possibly destroyed, and actions to mitigate effects may extend into multiple Operational Periods and require considerable coordination
- Elected and appointed governing officials, stakeholder groups, and political organizations require a moderate level of interaction

Span of Control Indicators

- IC role filled
- Large numbers of resources supervised indirectly through the expansion of the Operations Section and its subordinate positions
- Branch Director position(s) may be filled for organizational or span of control purposes
- Division Supervisors, Group Supervisors, Task Forces, and Strike Teams used to reduce span of control
- All Command Staff positions filled
- All General Staff positions filled
- Most ICS functional units filled to reduce workload

- --When ordering pump kits, consider ordering a second as a backup.
- --Will your incident need a Fuel Tender?

TYPE 3 INCIDENT COMPLEXITY INDICAT	TORS
General Indicators	Span of Control Indicators
 Incident typically extends into multiple operational periods Incident objectives usually not met within the first or second operational period Resources may need to remain at scene for multiple operational periods, requiring logistical support Numerous kinds and types of resources may be required Formal Incident Planning Process is initiated and followed Written Incident Action Plan (IAP) needed for each Operational Period Responders may range up to 200 total personnel Incident may require an Incident Base to provide support Population surrounding incident affected Critical Infrastructure or Key Resources may be adversely affected and actions to mitigate effects may extend into multiple Operational Periods Elected and appointed governing officials, stakeholder groups, and political organizations require some level of interaction 	 IC role filled Numerous resources supervised indirectly through the establishment and expansion of the Operations Section and its subordinate positions Division Supervisors, Group Supervisors, Task Forces, and Strike Teams used to reduce span of control to an acceptable level Command Staff positions may be filled to reduce workload or span of control General Staff position(s) may be filled to reduce workload or span of control ICS functional units may need to be filled to reduce workload

Indicators of Incident Complexity

Common indicators may include the area (location) involved; threat to life, environment and property; political sensitivity, organizational complexity, jurisdictional boundaries, values at risk, and weather. Most indicators are common to all incidents, but some may be unique to a particular type of incident. The following are common contributing indicators for each of the five complexity types.

Type 5 Incident Complexity Indicators

not adversely affected

TYPE 5 INCIDENT COMPLEXITY INDICAT	ONS
General Indicators	Span of Control Indicators
 Incident is typically terminated or concluded (objective met) within a short time once resources arrive on scene For incidents managed for resource objectives, minimal staffing/oversight is required Resources vary from two to six firefighters Formal Incident Planning Process not needed Written Incident Action Plan (IAP) not needed Minimal effects to population immediately surrounding the incident Critical Infrastructure, or Key Resources, 	 Incident Commander (IC) position filled Single resources are directly supervised by the IC Command Staff or General Staff positions not needed to reduce workload or span of control

TYPE 4 INCIDENT COMPLEXITY INDICAT	ORS
General Indicators	Span of Control Indicators
 Incident objectives are typically met within one operational period once resources arrive on scene, but resources may remain on scene for multiple operational periods Multiple resources may be needed Resources may require limited logistical support Formal Incident Planning Process not needed Written Incident Action Plan (IAP) not needed Limited effects to population surrounding incident Critical Infrastructure or Key Resources may be adversely affected, but mitigation measures are uncomplicated and can be implemented within one Operational Period Elected and appointed governing officials, stakeholder groups, and political organizations require little or no interaction 	 IC role filled Resources either directly supervised by the IC or supervised through an ICS Leader position Task Forces or Strike Teams may be used to reduce span of control to an acceptable level Command Staff positions normally not filled to reduce workload or span of control General Staff position(s) normally not filled to reduce workload or span of control

WORK/REST MONITORING & DOCUMENTATION FORM

This form is designed to help the IC document and calculate the amount of rest required to meet the 2:1 Work/Rest guidelines.

- IA operational period is not to exceed 24 hours except in an Agency Administrator approves to (1) accomplish immediate and critical objectives or (2) address immediate and critical firefighter or public safety issues.
- The operational period commences when the employee comes on duty that morning. Subsequent operational shifts are not to exceed 16 hours.

Date	me is defined as time Resource	Operational Period Start Time	Operational Period Stop Time	Total Hours Worked	Rest Time

Part C: Organization (continued)

Recommended Organization (circle one):

Type 5	Majority of items rated as "Very Low"; a few items may be rated in other categories.			
Type 4 Majority of items rated as "Low", with some items rated as "Very Low", and a few items				
1 ype 4	rated as "Moderate" or "High".			
Type 3	Majority of items rated as "Moderate", with a few items rated in other categories.			
Type 2	Majority of items rated as "Moderate", with a few items rated as "High".			
Type 1	Majority of items rated as "High"; a few items may be rated in other categories.			

Rationale:

Use this section to document the incident management organization for the fire. If the incident management organization is different than the Wildland Fire Risk and Complexity Assessment recommends, document why an alternative organization was selected. Use the "Notes/Mitigation" column to address mitigation actions for a specific element, and include these mitigations in the rationale.

Name of Incident:		Unit(s):
Date/Time:	Signature of Preparer:	

Part C: Organization (continued)

Social/Political Concerns					Notes/Mitigation
C4. Objective Concerns Evaluate the complexity of the incident objectives and rank this element very low, low, moderate, or high. Considerations: clarity; ability of current organization to accomplish; disagreement among cooperators; tactical/operational restrictions; complex objectives involving multiple focuses; objectives influenced by serious accidents or fatalities.	Very Low	L	M	Н	
C5. External Influences Evaluate the effect external influences will have on how the fire is managed and rank this element very low, low, moderate, or high. Considerations: limited local resources available for initial attack; increasing media involvement, social/print/television media interest; controversial fire policy; threat to safety of visitors from fire and related operations; restrictions and/or closures in effect or being considered; pre-existing controversies/ relationships; smoke management problems; sensitive political concerns/interests.	Very Low	L	M	Н	
C6. Ownership Concerns Evaluate the effect ownership/jurisdiction will have on how the fire is managed and rank this element very low, low, moderate, or high. Considerations: disagreements over policy, responsibility, and/or management response; fire burning or threatening more than one jurisdiction; potential for unified command; different or conflicting management objectives; potential for claims (damages); disputes over suppression responsibility. Enter the number of items circled for each	Very Low	L	M	Н

		2. In country not seen in daylight				
		3. Safety Zones and Escape Routes not identified				
		4. Unfamiliar w/ weather & local factors influencing fire behavior				
		5. Uniformed on strategy, tactics and hazards				
		6. Instructions and assignments not clear				
		7. No communications link with crewmembers/supervisor				
		8. Constructing line without safe anchor point				
		9. Building fireline downhill with fire below				
		10. Attempting frontal assault on fire				
		11. Unburned fuels between you and fire				
		12. Cannot see main fire, not in contact with anyone who can				
		13. On a hillside where rolling material can ignite fuel below				
		14. Weather is getting hotter and drier				
		15. Wind increases and/or changes direction				
		16. Getting frequent spot fires across the line				
		17. Terrain and fuels make escape to safety zones difficult				
		18. Taking a nap near fireline

Circle the Relative Risk Rating (from		_			
Part B).		L	M	H	
Implementation Difficulty					Notes/Mitigation
					140tcs/141tigation
C1. Potential Fire Duration Evaluate the estimated length of time that the fire may continue to burn if no action is taken and amount of season remaining. Rank this element low, moderate, or high. Note: This	N/A Very Short	L Short	M	H Long	
will vary by geographic area.					
C2. Incident Strategies (Course of Action) Evaluate the level of firefighter and aviation exposure required to successfully meet the current strategy and implement the course of action. Rank this element as very low, low, moderate, or high. Consider the likelihood that those resources will be effective; exposure of firefighters; reliance on aircraft to accomplish objectives; and whether there are clearly defined trigger points.	Very Low	L	M	Н	
C3. Functional Concerns					
Evaluate the need to increase organizational structure to adequately and safely manage the incident, and rank this element very low (minimal resources committed), low (adequate), moderate (some additional support needed), or high (current capability inadequate). Considerations: Incident management functions (logistics, finance, operations, information, planning, safety, and/or specialized personnel/equipment) are inadequate and needed; availability of resources; access to EMS support; heavy commitment of local resources to logistical support; ability of local businesses to sustain logistical support; substantial air operation which is not properly staffed; worked multiple operational periods without achieving initial objectives; incident personnel	Very Low	L	M	Н	
overextended mentally and/or physically; Incident Action Plans, briefings, etc. missing or incomplete; performance of firefighting resources affected by cumulative fatigue; and ineffective communications.					

Part B: Organization (continued)

Probability				Notes/Mitigation
B7. Time of Season Evaluate the potential for a long-duration fire and rank this element low, moderate, or high. Considerations: time remaining until a season ending event.	L Late	M Mid	H Early	Q
B8. Barriers to Fire Spread Evaluate the barriers to fire spread and their potential to limit fire growth, and rank this element low, moderate, or high. Considerations: If many natural and/or humanmade barriers are present, rank this element low. If some barriers are present, rank this element moderate. If no barriers are present, rank this element high.	L Many	M	H Few	
B9. Seasonal Severity Evaluate fire danger indices and rank this element low/moderate, high, or very high/extreme. Considerations: Fire danger indices such as energy release component (ERC); drought status; live and dead fuel moistures; fire danger indices; adjective fire danger rating; geographic area preparedness level.	L/M	Н	VH/E	
Enter the number of items circled for each column.				

Relative Risk Rating (circle one):

LOW	Majority of items are "Low", with a few items rated as "Moderate" and/or "High".
MODERATE	Majority of items are "Moderate", with a few items rated as "Low" and/or "High".
HIGH	Majority of items are "High"; A few items may be rated as "Low" or "Moderate".

ICS 201 (12)

Wildland Fire Risk and Complexity Assessment

The Wildland Fire Risk and Complexity Assessment should be used to evaluate firefighter safety issues, assess risk, and identify the appropriate incident management organization. Determining incident complexity is a subjective process based on examining a combination of indicators or factors. An incident's complexity can change over time; incident managers should periodically re-evaluate incident complexity to ensure that the incident is managed properly with the right resources.

Instructions:

Incident Commanders should complete Part A and Part B and relay this information to the Agency Administrator. If the fire exceeds initial attack or will be managed to accomplish resource management objectives, Incident Commanders should also complete Part C and provide the information to the Agency Administrator.

Part A: Firefighter Safety Assessment

Evaluate the following items, mitigate as necessary, and note any concerns, mitigations, or other information.

intigations, of other information.	
Evaluate these items	Concerns, mitigation, notes
LCES	
Fire Orders and Watch Out Situations.	
Multiple operational periods have occurred	
without achieving initial objectives.	
Incident personnel are overextended	
mentally and/or physically and are affected	
by cumulative fatigue.	
Communication is ineffective with tactical	
resources and/or dispatch.	
Operations are at the limit of span of	
control.	
Aviation operations are complex and/or	
Aviation operations are complex and/or	
aviation oversight is lacking.	
Logistical support for the incident is	
inadequate or difficult.	

Part B: Relative Risk Assessment

B1. Infrastructure/Natural/Cultural Concerns Based on the number and kinds of values to be protected, and the difficulty to protect them, rank this element low, moderate, or high. Considerations: key resources potentially affected by the fire such as urban interface, structures, critical municipal watershed, commercial timber, developments, recreational facilities, power/pipelines, communication sites, highways, potential for evacuation, unique natural resources, designated areas (i.e. wilderness), T&E species habitat, and cultural sites. B2. Proximity and Threat of Fire to Values Evaluate the potential threat to values based on their proximity to the fire, and rank this element low, moderate, or high. B3. Social/Economic Concerns Evaluate the potential impacts of the fire to social and/or economic concerns, and rank this element low, moderate, or high. Considerations: impacts to social or economic
Concerns Based on the number and kinds of values to be protected, and the difficulty to protect them, rank this element low, moderate, or high. and/or economic concerns, and rank this element low, moderate, or high. Considerations: impacts to social or economic
low, moderate, or high. Considerations: impacts to social or economic
Considerations: impacts to social or economic
concerns of an individual hydroge community on
concerns of an individual, business, community or
other stakeholder; degree of support for the wildland
fire program and resulting fire effects; other fire
management jurisdictions; tribal subsistence or
gathering of natural resources; air quality regulatory
requirements; public tolerance of smoke, including
health impacts; potential for evacuation and
ingress/egress routes; and restrictions and/or closures
in effect or being considered.
Hazards Notes/Mitigation
B4. Fuel Conditions
Consider fuel conditions ahead of the fire and rank L M H
this element low, moderate, or high.
Evaluate fuel conditions that exhibit high ROS and
intensity for your area, such as those caused by
invasive species or insect/disease outbreaks; and/or
continuity of fuels.
B5. Fire Behavior
Evaluate the current and expected fire behavior L M H
and rank this element low, moderate, or high.
Considerations: intensity; rates of spread; crowning;
profuse or long-range spotting.
B6. Potential Fire Growth
Evaluate the potential fire growth, and rank this L M H
element low, moderate, or high.
Considerations: Considerations would include current
and expected fire growth based on fire behavior
analysis and the weather forecast and/or the ability to control the fire.
